## Terms & Conditions for Buying E-Book

- The User must Read & Accept the Terms and Conditions (T&C) carefully before clicking on the accept option for Buying the Online Soft Copy of E-books. Under this Particular Facility you may buy only the Online Soft Copy of E-books, no Hard Copy or Printed Copy shall be provided under this facility.
- These E-Books are valid for 365 days online reading only (From the Date of Purchase) and no kind of Downloading, Printing, Copying, etc. are allowed in this facility as these products are just for Online Reading in your Mobile / Tablet / Computers.
- All the online soft copy E-books given in this website shall contain a diffused watermark on nearly every page to protect the material from being pirated / copy / misused, etc.
- This is a Chargeable Facility / Provision to Buy the Online Soft Copy of E-books available online through our Website Which a Subscriber / Buyer may Read Online on his or her Mobile / Tablet / Computer. The E-books content and their answer given in these Soft Copy provides you just the approximate pattern of the actual Answer. However, the actual Content / Study Material / Assignments / Question Papers might somewhat vary in its contents, distribution of marks and their level of difficulty.
- These E-Books are prepared by the author for the help, guidance and reference of the student to get an idea of how he/she can study easily in a short time duration. Content matter & Sample answers given in this E-Book may be Seen as the Guide/Reference Material only. Neither the publisher nor the author or seller will be responsible for any damage or loss due to any mistake, error or discrepancy as we do not claim the Accuracy of these solution / Answers. Any Omission or Error is highly regretted though every care has been taken while preparing these E-Books. Any mistake, error or discrepancy noted may be brought to the publishers notice which shall be taken care of in the next edition. Please consult your Teacher/Tutor or refer to the prescribed & recommended study material of the university / board / institute / Govt. of India Publication or notification if you have any doubts or confusions before you appear in the exam or Prepare your Assignments before submitting to the University/Board/Institute.
- Publisher / Study Badshah / shall remain the custodian of the Contents right / Copy Right of the Content of these reference E-books given / being offered at the website [www.studybadshah.com](http://www.studybadshah.com).
- The User agrees Not to reproduce, duplicate, copy, sell, resell or exploit for any commercial purposes, any portion of these Services / Facilities, use of the Service / Facility, or access to the Service / Facility.
- The Price of these E-books may be Revised / Changed without any Prior Notice.
- The time duration of providing this online reading facility of 365 days may be alter or change by [studybadshah.com](http://studybadshah.com) without any Prior Notice.
- The Right to accept the order or reject the order of any E-books made by any customer is reserved with [www.studybadshah.com](http://www.studybadshah.com) only.
- All material prewritten or custom written is intended for the sole purpose of research and exemplary purposes only. We encourage you to use our material as a research and study aid only. Plagiarism is a crime, and we condone such behaviour. Please use our material responsibly.
- In any Dispute What so ever Maximum Anyone can Claim is the Cost of a particular E-book which he had paid to Study Badshah company / website.
- If In case any Reader/Student has paid for any E-Book and is unable to Access the same at our Website for Online Reading Due to any Technical Error/ Web Admin Issue / Server Blockage at our Website [www.studybadshah.com](http://www.studybadshah.com) then He will be send a New Link for that Particular E-Book to Access the same and if Still the Issue is Not Resolved Because of Technical Error/ Web Admin Issue / Server Blockage at our website then His Amount for that Particular Purchase will be refunded by our website via PayTM.
- All the Terms, Matters & Disputes are Subjected to "Delhi" Jurisdiction Only.

# CONTENTS

<b>S.No.</b>	<b>Page</b>
1. Operating System: An Overview .....	1
2. Processes .....	15
3. Interprocess Communication and Synchronization .....	33
4. Deadlocks .....	49
5. Memory Management .....	57
6. Virtual Memory .....	72
7. I/O and File Management .....	85
8. Security and Protection .....	102
9. Multiprocessor Systems .....	114
10. Distributed Operating Systems .....	124
11. Case Study–Unix .....	141
12. Case Study–Windows 2000 .....	159

# OPERATING SYSTEMS

## INTRODUCTION TO OPERATING SYSTEMS AND PROCESS MANAGEMENT

### Operating System: An Overview

#### INTRODUCTION

Working with Computers, an Operating System (OS) would be an unpleasant complication of details. Carrying out a seemingly simple procedure, like loading an application program from disk to primary memory, would require hours of work. Application programs themselves would be longer, more complicated and more expensive than they are now. Special versions of software would have to be written for virtually every model of machines. Luckily the availability of standard Operating System has prevented all of this and more.

#### CHAPTER AT A GLANCE

#### WHAT IS AN OPERATING SYSTEM?

An Operating System run on computer hardware and serves as a platform for other software to run on the computer system.

An Operating System is a program (system software) which acts as an interface between user and computer hardware.

A Computer System can be logically divided into four components:

Computer Hardware, Operating System, Application Programs and Users.

An Operating System controls and coordinates the hardware components (CPU, Memory, I/O devices) among various application programs for different users.

The Operating System control every task your computer carries out and manages system resources.

#### Operating System has Two Main Objectives:

**Convenience:** An Operating System makes a computer more convenient to us.

**Efficiency:** An Operating System allows the computer resources to be used in an efficient manner.

## 2/NEERAJ : OPERATING SYSTEMS

Operating System is also called a **Resource Manager**. Operating System manages all computer **resources** and **allocates** them to a specific program and uses as it require completing its tasks.

The Operating System hides all the innermost details of the working of computer hardware components and provides a simple, usable and effective model of a computer. This type of image of a computer is called **virtual machine**.

The common operating systems are the windows family of operating systems (*viz.* Windows 95, 98, 2000.NT, VISTA), the UNIX family of operating systems (which includes UNIX, LINUX and many other derivatives) and the Macintosh Operating System.

### GOALS OF AN OPERATING SYSTEM

Any Operating System should meet the following major goals:

- (a) Optimize the use of computer resource so as to maximize its throughput.
- (b) Create a user-friendly computing environment for accessing the computer resources.
- (c) To hide details of hardware by creating abstraction.
- (d) To allocate resources to processes (Manage resources).
- (e) Provide a pleasant and effective user interface.

### GENERATIONS OF OPERATING SYSTEMS

The history of computer development is often referred to in reference to the different generations of computing devices. Each generation of computer is characterized by a major technological development that fundamentally changed the way computers operate, resulting in increasingly smaller, cheaper, and more powerful and more efficient and reliable devices.

Read about each generation and the developments that led to the current devices that we use today.

#### 0th Generation: (1642 – 1940s)

Notable characteristics and events included:

- Mechanical gears and electromechanical relays.
- In 1642 Blaise Pascal creates mechanical calculating machine using gears, hand powered, performs + and -.
- In 1834 Charles Babbage creates the Difference Engine which runs a single algorithm to compute tables of numbers. Output was punched copper plates. Never completed. Instead, began work on Analytical Engine, a programmable machine. Never completed. Was assisted by Ada Lovelace (first programmer) to write code for machine.
- In 1930's Konrad Zuse builds a series of automatic calculating machines (Z1) similar to Babbage's but using electromechanical relays. Destroyed in 1944 by allied bombing of Berlin.

#### 1st Generation: (1940 – 1956: Vacuum Tubes)

- Vacuum tubes.
- Absolute machine language using wired plug boards.
- No programming languages or operating systems.
- Programmer signed up for a block of time and brought own plug boards.
- Serial processing.
- In 1930's, John Atanasoff at Iowa State College designs and builds special purpose computer using vacuum tubes. First electronic computer but still debated. First computer to use RAM.
- In 1946, John Mauchly and J.Presper Eckert design and build first general

purpose electronic computer, the ENIAC. 18,000 vacuum tubes, 1500 relays, and 30 tons. Hard-wired programs.

- In 1946, John Von Neumann writes paper on stored program concept.
- In 1951 Eckert and Mauchly complete the first commercially sold computer, the UNIVAC I. Used to predict the winner of presidential election 1952.
- IBM creates Model 650. Slow, but used punch cards.

### 2nd Generation: (1956 – 1964: Transistors)

- Transistor hardware, more reliable, sold commercially.
- Programmer would write program in FORTRAN, punch cards.
- Operator (or programmer) reads in program card deck + FORTRAN compiler card deck - Wasteful! So...
- Developed BUFFERING - input device reads multiple records, trying to “be ready” for CPU.
- FORTRAN introduced in 1957. COBOL introduced in 1960.
- DEC PDP-1 introduced in 1961. First mini, with 4K RAM, \$120,000. 50 sold.
- IBM introduces model 1401 and 7094 business computer in 1961 and 1962.
- CDC introduces 6600 parallel processor number cruncher in 1964.

### 3rd Generation: (1964 – 1979:

#### Integrated Circuits)

- IC technology
- IBM S/360 series of computers (family) created - one operating system ran on all models. OS was humongous! (Read Brooks - Mythical Man Month).
- Developed MULTIPROGRAMMING - CPU switches from one job to next very

quickly when: I/O needed, job finishes (errs).

- Ken Thompson wrote UNICS/UNIX based upon concepts in MULTICS.
- Developed REAL-TIME OS - SABRE airline reservation system.
- Intel introduces 8080 microprocessor in 1974. General purpose 8-bit 64K RAM.
- Motorola introduces 6800 in 1974.
- Altair 8800 introduced in 1974.
- Bill Gates rewrites BASIC for microcomputer. First programming language on a micro. (1974)
- Gary Kildall creates CP/M in 1974.
- Steve Jobs and Steve Wozniak create Apple Computer (1974-1975).
- Apple II comes out in 1977.

### 4th Generation:

#### (1979–Present: Microprocessors)

- Personal Computers, LSI technology, single-user OS.
- Developed NETWORK OS - loosely connected computers, each doing its own thing.
- Developed DISTRIBUTED OS - more tightly connected computers, working together on a large problem.
- SECURITY continued to improve, including access control, information flow control, and certification.
- SYSTEM STRUCTURE evolved into a layered or hierarchical design.
- VAX VMS, OS/2.
- UNIX, Linux (1992-93), MVS simplified, Windows NT.
- IBM introduces IBM PC with 64K, 8088 processor (1981).
- Apple introduces LISA 68000 based (1984).

#### 4/NEERAJ : OPERATING SYSTEMS

- SUN introduces its own microprocessor based on RISC technology-the SPARC (Scalable Processor Architecture).
- Early 1990s - virtual reality, Digital's Alpha Architecture (1992) - 64-bit RISC.
- PowerPC (1993) - very powerful RISC processor.
- Apple Newton (1993) - first PDA, weighed 1 pound, 20 MHz Acorn RISC.
- Intel Pentium (1993) - CISC *can* run fast, 3.1 million transistors, 60 MHz.
- Apple's Power Mac (March 1994) - first mainstream RISC pc.
- World Wide Web.
- Windows 95 – first really successful Microsoft Windows product.
- Toy Story – First all digital movie.
- NetWare v. 4, then 6.
- Windows Server NT (followed by much better 2000, 2003, 2008).
- IPv6, Multi-core processors, Apple's iPhone, Cloud computing.

#### TYPES OF OPERATING SYSTEMS

**Operating System** can be CLASSIFIED INTO ONE OF MORE OF THE FOLLOWING CATEGORIES: **Batch OS, Multiprogramming OS, Network OS and Distributed OS.**

##### **Batch Processing Operating System:**

During batch processing environment, it requires grouping of similar jobs, which consist of programs, data and system commands. This type of processing is suitable for programs with large computation time with no need of user interaction or involvement. For example, payroll, forecasting, statistical analysis and large scientific number crunching programs. Users need not wait while the job is being processed. They can submit their programs to operators and collect them later. The disadvantages of batch operating systems are

non-interactive environment and Off-line debugging.

##### **Time Sharing**

Time-sharing is a way of allowing several people to run program on different terminals, but on the same computer system, at the same time. This feature is only found in large Operating System. Time-sharing is a form of multi-programmed OS that operates in an interactive mode with a quick response time. The user types a request to the computer through a keyboard. The computer processes it and a response, if any is displayed on the user's terminal. A time sharing system allows many users to simultaneously share the computer resources.

##### **Real Time Operating System (RTOS)**

A real-time OS responds to the input instantly. They are used in special embedded applications. It is used in environments where a large number of events, most external to computer systems, must be accepted and processed in a short time or within certain deadlines. For example, flight control, real-time simulations, military applications, etc. General-purpose operating systems, such as DOS and UNIX, are not real-time. A primary objective of real-time system is to provide quick response times.

##### **Multiprogramming Operating System:**

Multiprogramming is the concurrent execution of two or more processes. Multiprogramming operating systems are fairly sophisticated compared to batch operating systems. Multiprogramming has a significant potential for improving system throughput and resource utilization with very minor differences. Different forms of multiprogramming operating systems are multitasking, multiprocessing and multi-user operating systems.

##### **Multiprocessing Operating System**

A multiprocessing system is a computer that has more than one processor. A multiprocessing
